Pebblous

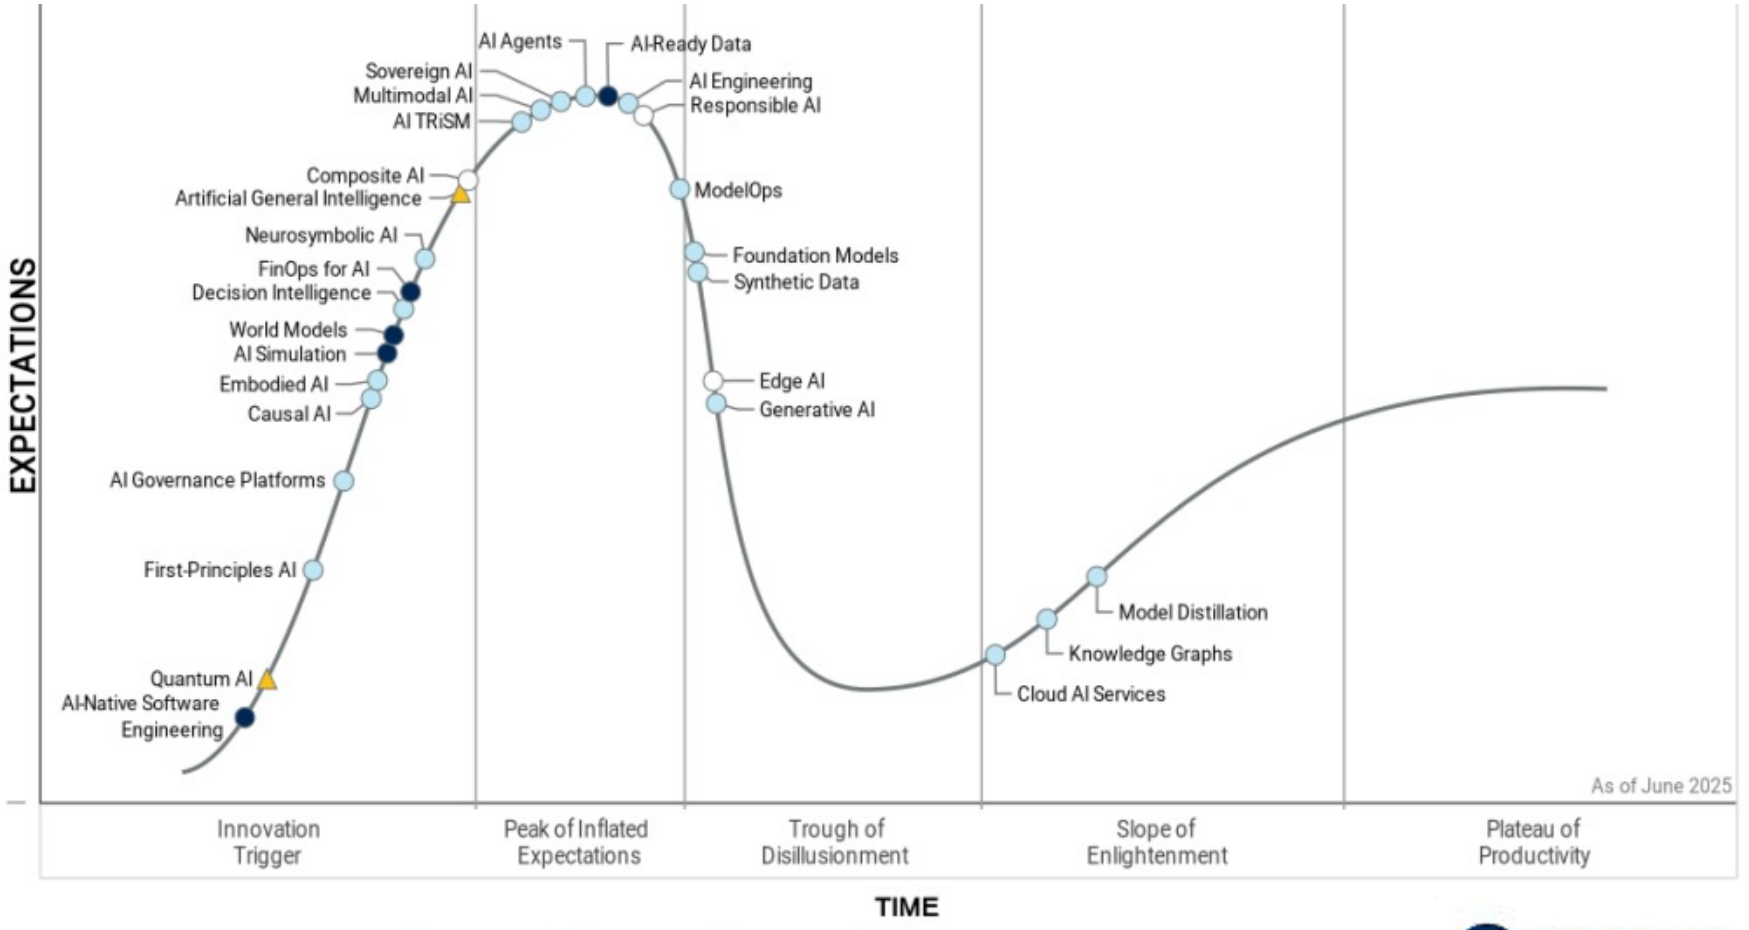
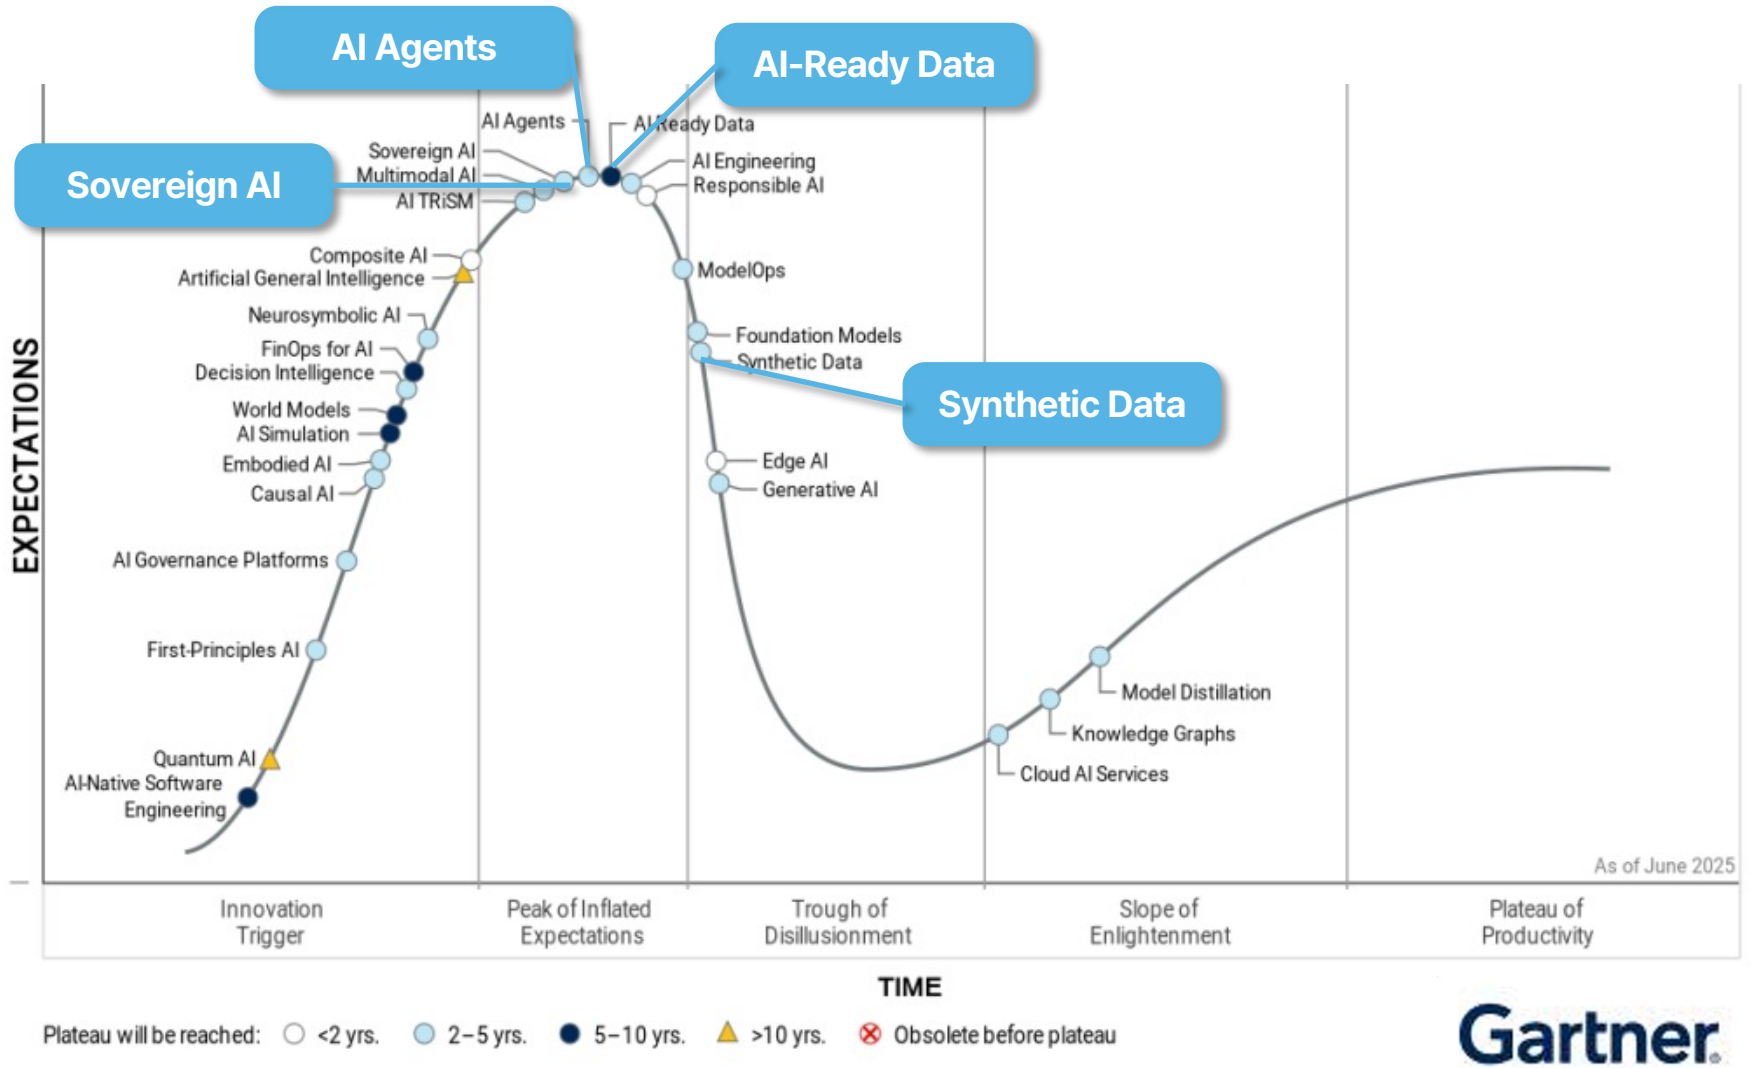
Hype Cycle for AI, 2025



Gartner

Pebblous

Hype Cycle for AI, 2025



The era of Sovereign AI calls for a complete reconfiguration of data evaluation.

Professor Yejin Choi (Stanford University)

2025-09-25, UN Security Council

"Current AI models are heavily centered on English, with significantly lower performance in other languages. They also exhibit a narrow understanding of cultural values, leaving many communities excluded from the benefits of AI.

This issue cannot be solved in a piecemeal way — it is a fundamental problem. Therefore, we must change it from the ground up: the training data, the learning objectives, and even the evaluation methods. Only then can we build AI that is truly capable across diverse languages and contexts."

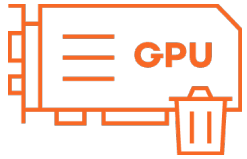
Pebblous

Pains from Data Quality

01

Poor Data Quality in AI Datasets

02



Wasted GPU Resources and Time

03

Increasing **AI Regulations**

Example Impact: EU AI Act imposes fines of 7% of global revenue or $35 million for non-compliance.

DataClinic

Pebblous

1. Quality Assessment

Pebblous provides a diagnostic service that embeds your AI training data through a DataLens, expresses it as a specific backer, and measures and explains its quality through scientific metrics and visualizations.

Step 1 → Step 2

Imaging

Unveiling Data's True Potential

Dive into the depths of your data with our advanced Imaging process. We transform complex datasets into a clear, observable format, revealing insights like never before.

Diagnosis

Precision-Driven Data Analysis

Our Diagnosis step meticulously examines the health of your data. Utilizing cutting-edge analytics, we identify strengths, uncover hidden patterns, and pinpoint areas for enhancement.

2. Quality Improvement

We provide services to diagnose datasets to create optimized synthetic data or remove unnecessary data to improve AI model performance.

Step 3 → Step 4

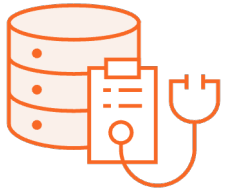
Report

Your Data Story, Articulated

Receive a comprehensive report that narrates your data's journey. It goes beyond numbers and graphs; it's a story of your data's current state, potential, and pathways to improvement.

Improvement

Elevating Data to New Heights



In the Improvement phase, we combine synthetic data enrichment (Data Bulk-up) with efficient data streamlining (Data Diet) to optimize your dataset for peak AI performance.

Product 01

DataClinic

Pebblous

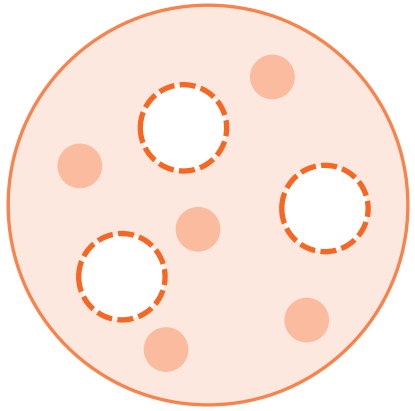
Low Density Area | Redundancy Area | Real Data | Synthetic Data

Data Replica

Creates synthetic data similar to the original while protecting content.

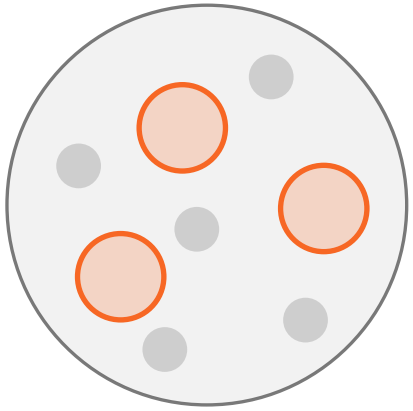


Benefit: Prevents personal information leaks.

Example: Data anonymization for privacy.

Data Bulk-Up

Adds synthetic data to fill gaps in the dataset.

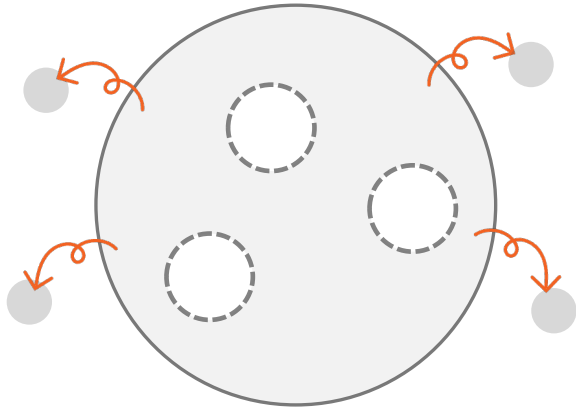


Benefit: Cuts data collection costs and boosts AI performance.

Example: Generating edge case data.

Data Diet

Removes redundant data while keeping model performance intact.



Benefit: Reduces AI costs and improves dev efficiency.

Example: Streamlining training datasets.

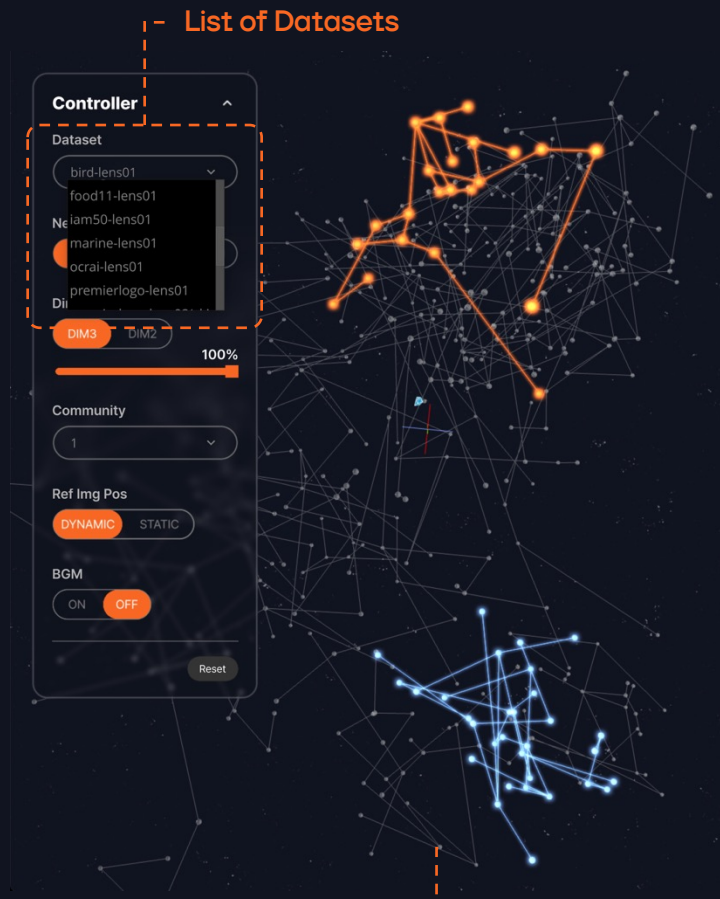
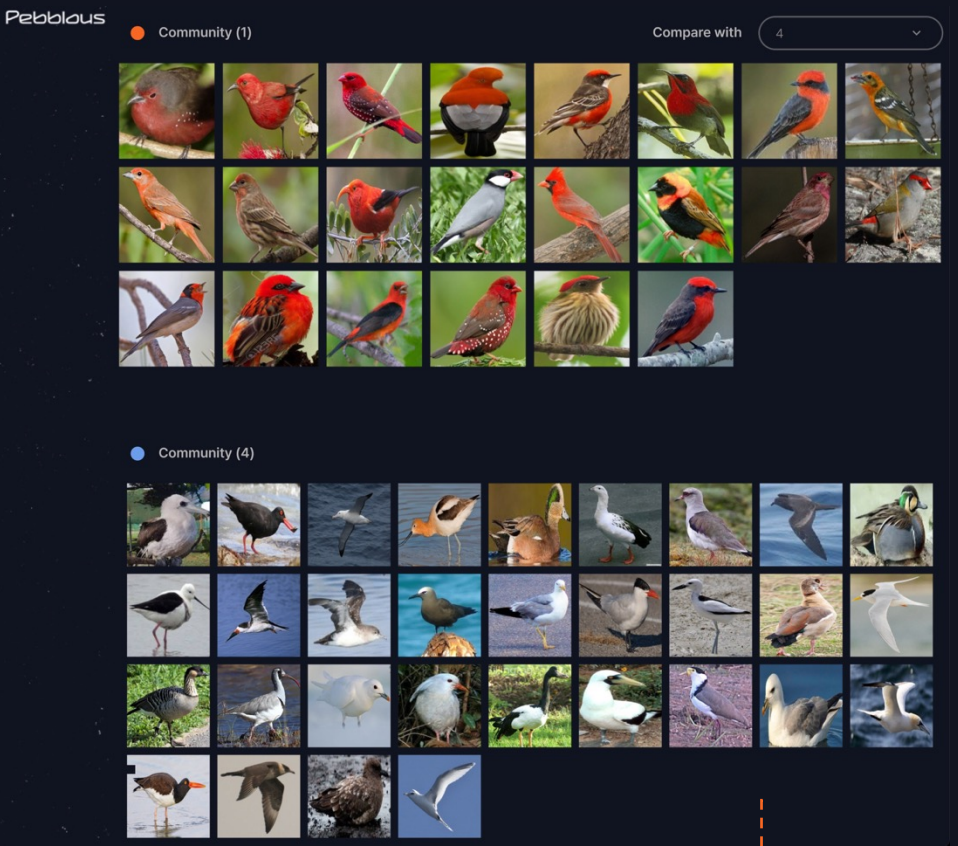
Product 02

PebbloScope

Pebblous





Visualization

- Explore 3D data communities optimized through Pebblous Data Lens.
- Identify clusters of similar or redundant data and analyze distribution.

Data Samples

- View and compare original images within data communities to analyze key characteristics.

Demo Video

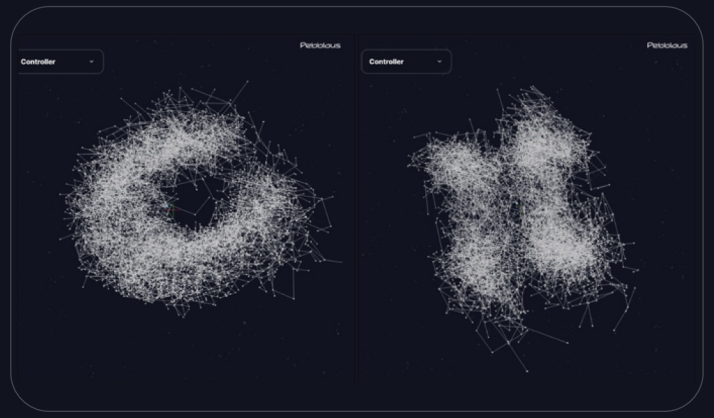
Pebblous

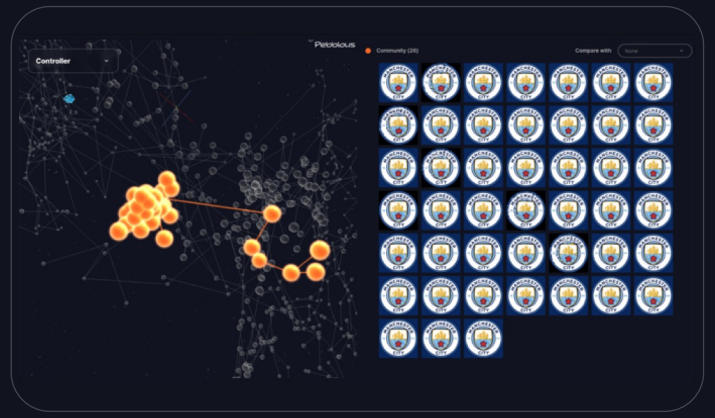
PebbloScope — Key Features



Optimized 3D Data Visualization

- AI training datasets processed through Pebblous DataLens are visualized in 3D.
- Enables observation of unique and distinct distribution characteristics of the data.

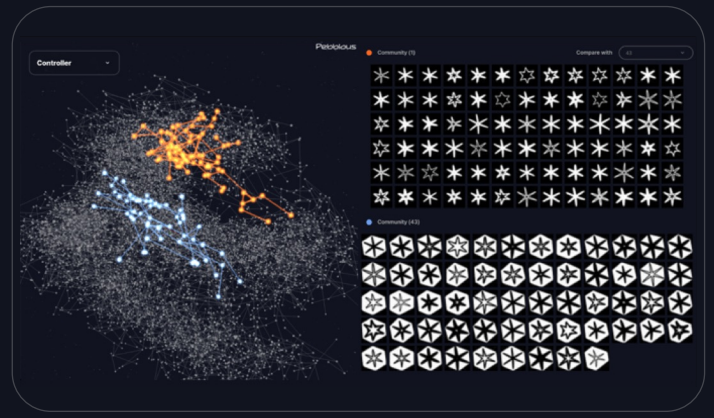
Example: Detecting cluster shapes from different perspectives.



Exploring Data Communities to Identify Issues

- Data communities, based on optimal dimensional distances, allow identification of data redundancy.
- Useful for spotting problematic or overpopulated clusters.

Example: Identifying overpopulated clusters in datasets like logo collections.



Comparison to Analyze Data Characteristics

- Compare data communities to highlight distinctive cluster features.
- Provides deeper insights for unique data distributions.

Example: Comparing similar data clusters within the same class.

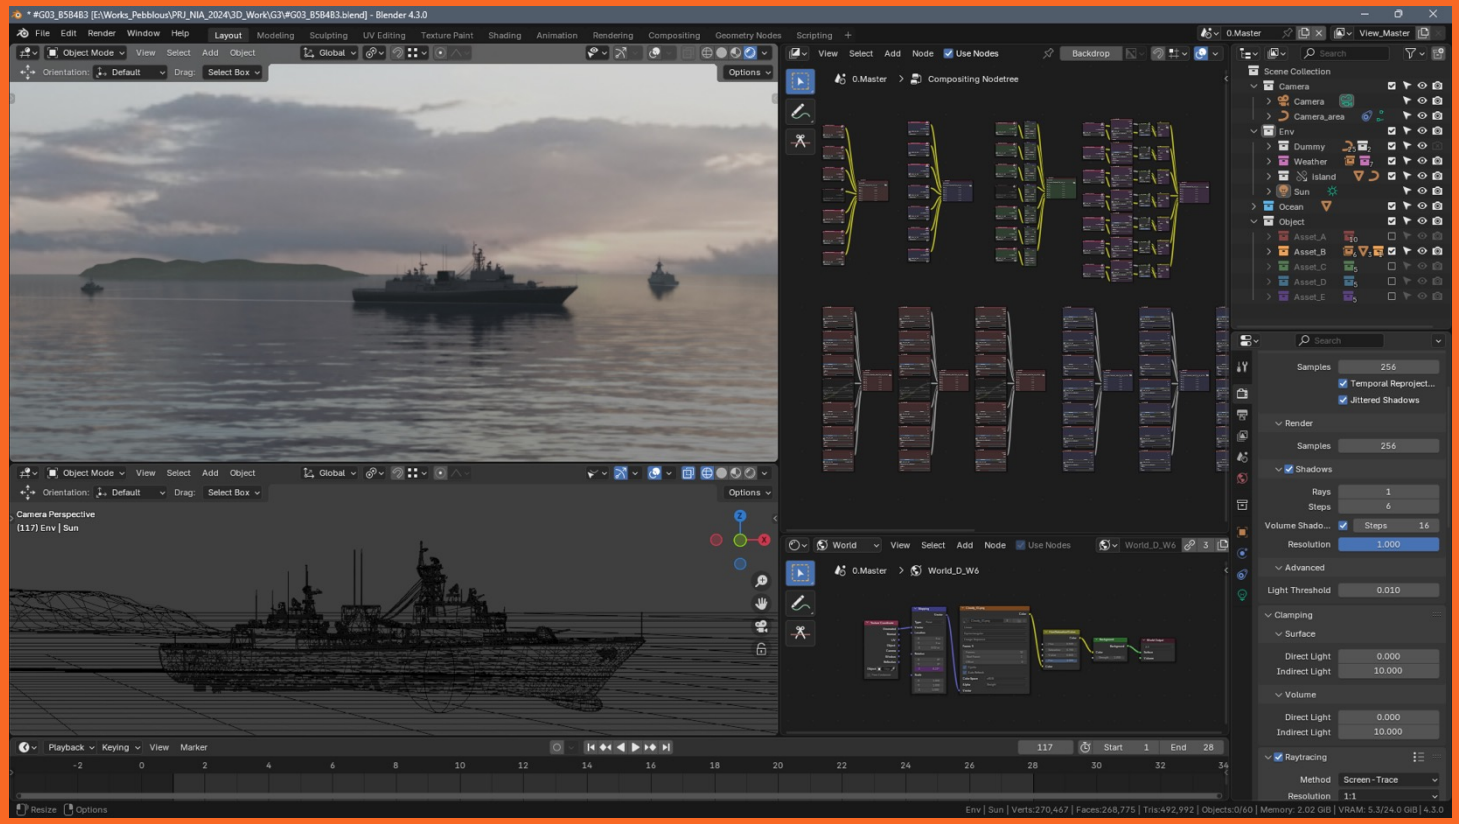
Synthetic Data

For AI training, synthetic data is generated when:
(1) Data quantity is insufficient,
(2) Real data cannot be obtained, or
(3) Data from diverse environments is required.



Product 03

Pebblous

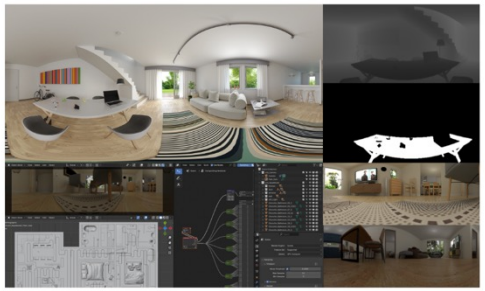
Synthetic Data Portfolio

https://dataclinic.ai/en/synthetic-data

Characters and poses in special environments Download sample images

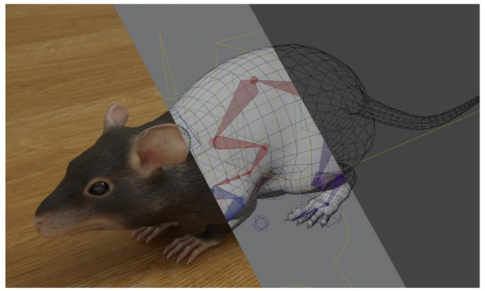
Synthesis data for AI learning for figures and attitude recognition in a special environment, such as children's perception within the vehicle

Robot autonomous driving field Download sample images



This is a dataset required for robots such as vacuum cleaners, and AI detects objects and plans optimal driving paths.

animal behavior Download sample images



Synthesis data for AI learning to classify mouse behavior and recognize body parts

Livestock sector Download sample images

After creating a stable diffusion -based LORA model for analysis of small behavioral forms

Single image 3D creation Download sample images

Drone Detection Download sample images

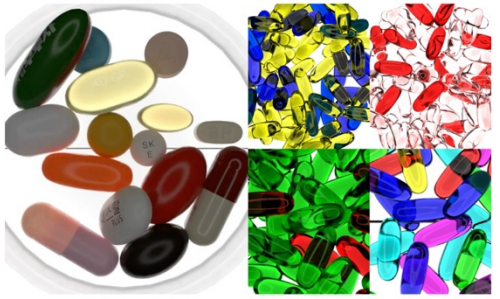
Diet monitoring Download sample images

Synthetic data for meals for monitoring. Use hybrids of 3D and generated models

Logistics field Download sample images

This is a dataset for automatically recognizing the inventory of the stand in an environment such as an unmanned shop.

Pharmaceutical field Download sample images



In the automatic pill automatic preparation system of large hospitals, a computer vision inspection requires a pill dataset of various forms and configuration. Synthesis data for the detection and coefficient of the pill

Waste Plastic Recycling Classification AI Synthetic Data Download sample images

Synthetic data for AI learning used to recycle resources through plastic material classification

Hyundai Motor Company Project

Project	Year	Applied Technology	Field Issues & Requirements	Solutions & Results
Synthetic Data for Driving Path Estimation Models	2022	Neural network model training using simulator **synthetic data**	GPS signal loss in large parking structures caused inaccurate parking location detection.	Built a synthetic-data-driven model that resolved path estimation without costly real-world data collection.
Tire Wear Prediction Model	2022	Experimental design, **synthetic data**, and **model training**	Predicting tire wear rates from driving sensor data — varying by driver behavior — to enable predictive maintenance.	Developed a tire wear prediction algorithm by extracting key features from vehicle driving sensor time-series data.
Synthetic Data for PBV Children's School Bus	2023	CG & GenAI Image **Synthetic Data**	Training camera-vision AI for PBV safety monitoring required large-scale child image datasets.	Generated diverse child-pose datasets using CG and GenAI, tailored for wide-angle in-vehicle cameras.
Reinforcement Learning Model for Ulsan Plant Painting Process Optimization	2025	**Reinforcement Learning** in a simulator environment	Optimizing multi-lane vehicle sequencing to minimize paint color changeovers in the painting process.	Enabled flexible adaptation across 5+ virtual configurations via RL-based optimization in a simulated environment.
Reinforcement Learning Model for GW Plant Assembly Process Optimization	2025	**Reinforcement Learning** in a simulator environment	Optimizing multi-lane vehicle sequencing to minimize model changeovers in the assembly process.	Implemented a complex assembly process in a simulator and developed an RL algorithm that optimizes the vehicle model conversion rate.

Pebblous

Competitor Comparison — data management, synthetic data, and visualization

Company	Location	Fund Raising	Revenue '23	Key Functions	Key Differentiator
Anomalo	US	88M USD (Series B, '24.11)	.	Recognized as a company specializing in data quality diagnostics in the 2025 Gartner Report.	Pebblous provides data quality diagnostics for unstructured data, complemented by PebbloScope visualization.
Shelf.io	US	60.7M USD (Series B, '21.8)	.	Recognized as a company specializing in data quality diagnostics in the 2025 Gartner Report.	Pebblous generates synthetic data based on quality diagnostics and provides unique visualization support through PebbloScope.
SuperbAI	KR	35M USD (Series C, '24.9)	.	A SaaS-based DataOps platform, recently launched a synthetic data service.	Unlike manual sourcing, SelectStar focuses on automated DataOps, recently targeting AI-Ready data evaluation as its core business.
Tonic.ai	US	46.2M USD (Series B, '21.11)	11.5M USD	Synthetic data generation for personal information protection	Pebblous provides synthetic data generation for unstructured data based on quality diagnostics.
Virtualitics	US	30.8M USD (Series C, '23.8)	18.2M USD	Data analysis and visualization powered by AI	Pebblous offers detailed quality diagnostics for AI training datasets, with both installed and web-based versions of PebbloScope.

Traction

Gartner Report

Develop Unstructured Data Management Capabilities to Support GenAI-Ready Data, Gartner, 2025.

The shortage of GenAI-ready data is cited as one of the main reasons behind the failure of generative AI deployments.
Product managers of data management software vendors must enhance their capabilities to handle unstructured data—through in-house development, integration, or partnerships—to effectively support customers in implementing generative AI.

Gartner

Table 1: Parameters to Prioritize Partnerships for Unstructured DMS

Unstructured DMS market segment	Current end-user demand[3]	Supply of specialized vendors/tools	Degree to which traditional structured DMS vendors support this capability	Specialized unstructured DMS vendors
Data integration	High	Medium	Medium	Bem, Iterative.ai, Pryon, Unstructured.io
Data quality	High	Medium	Medium	Anomalo, Pebblous, Shelf.io
Data governance	Medium	Low	Low	BigID, DryvIQ
Metadata management	Medium	Low	Medium	Instill AI, Labelbox

Gartner Report

Emerging Tech: Techscape for Startups in **Synthetic Data**, Gartner, 2025.

Pebblous provides Data Clinic services alongside its synthetic data solutions, performing precise quality diagnostics to generate synthetic data tailored for a wide range of computer vision learning applications.

The Korean startup Pebblous extends such simulations to encompass human and animal behavior, offering a unique perspective on interaction by generating precision-targeted synthetic data grounded in data quality diagnostics.

Electric Twin offers a solution for simulating synthetic human populations, enabling the prediction of human attitudes and behaviors.

Narnia Labs produces synthetically generated product designs for the manufacturing industry.

Pebblous offers a synthetic data solution paired with a data clinic service, delivering quality diagnostics to produce targeted synthetic data for diverse computer vision training applications.

Domain-Specific Synthetic Data Startups

MDClone provides patient medical analysis and prediction based on artificial data to overcome privacy and security risks.

This research note is restricted to the personal use of joohaeng@pebblous.ai.

Traction

Gartner Report

Boost Innovation Ecosystem With **Synthetic Data**, Gartner, 2025.

Synthetic data is emerging as a core infrastructure that enables privacy protection and regulatory compliance, while facilitating AI training and collaboration without relying on real data.

It is rapidly spreading across sectors such as public services and healthcare, and Gartner projects that synthetic data will replace real data by 2030. CIOs must focus on quality validation and strategic technology partnerships to foster an ecosystem of innovation.

Pebblous

Mostly AI	2017	Synthetic data for AI/ML training, software testing and analytics
NayaOne	2019	Synthetic data to test, train and model product for financial services industry
Parallel Domain	2017	Synthetic data for autonomy-related use cases, including training and testing of autonomous vehicles, robots, and drones
Particle Health	2018	Synthetic data solution and healthcare insight tools for data analysis and prediction
Pebblous	2021	Synthetic data for diverse computer vision training applications including pose estimation, object detection
Rendered.ai	2019	Synthetic data for training computer vision systems in industries such as defense, earth intelligence, manufacturing and logistic facility

This research note is restricted to the personal use of joohaeng@pebblous.ai.

Led by Pebblous in consortium with KISTI, the company secured a large-scale national project and is currently developing an AI agent system.

Pebblous

Solution Expansion: **Data Greenhouse SaaS** — From Data Quality Management to Supply

Green Data — AI-Ready, High-Quality Datasets

Providing clean, optimized data purpose-built for AI training and deployment

01 **Quality-First Data Supply**

Assess, optimize, and deliver high-efficiency datasets that meet AI-readiness standards — so your models perform better from day one.

02 **Semantic-Powered Data Generation**

Generate and refine AI-ready datasets through semantic computation:

- Automated quality assessment and synthetic data generation at scale
- Deduplication, debiasing, and privacy-preserving pipelines
- Semantic search, inference, and fusion for richer outputs

Data Greenhouse — Cloud-Based Data Governance SaaS

A unified platform to continuously monitor, manage, and improve your data for AI compliance

01 **Next-Gen Data Management**

Continuously evaluate and enhance AI-suitability of your data with a governance-first management platform — built for scale.

02 **AI Regulation-Ready Compliance**

Stay ahead of evolving AI regulations through semantic data governance:

- Automated, full-scan quality assessment at scale
- Flexible data lifecycle management across workflows
- Built-in safety and ethics validation for sustainable AI

Pebblous

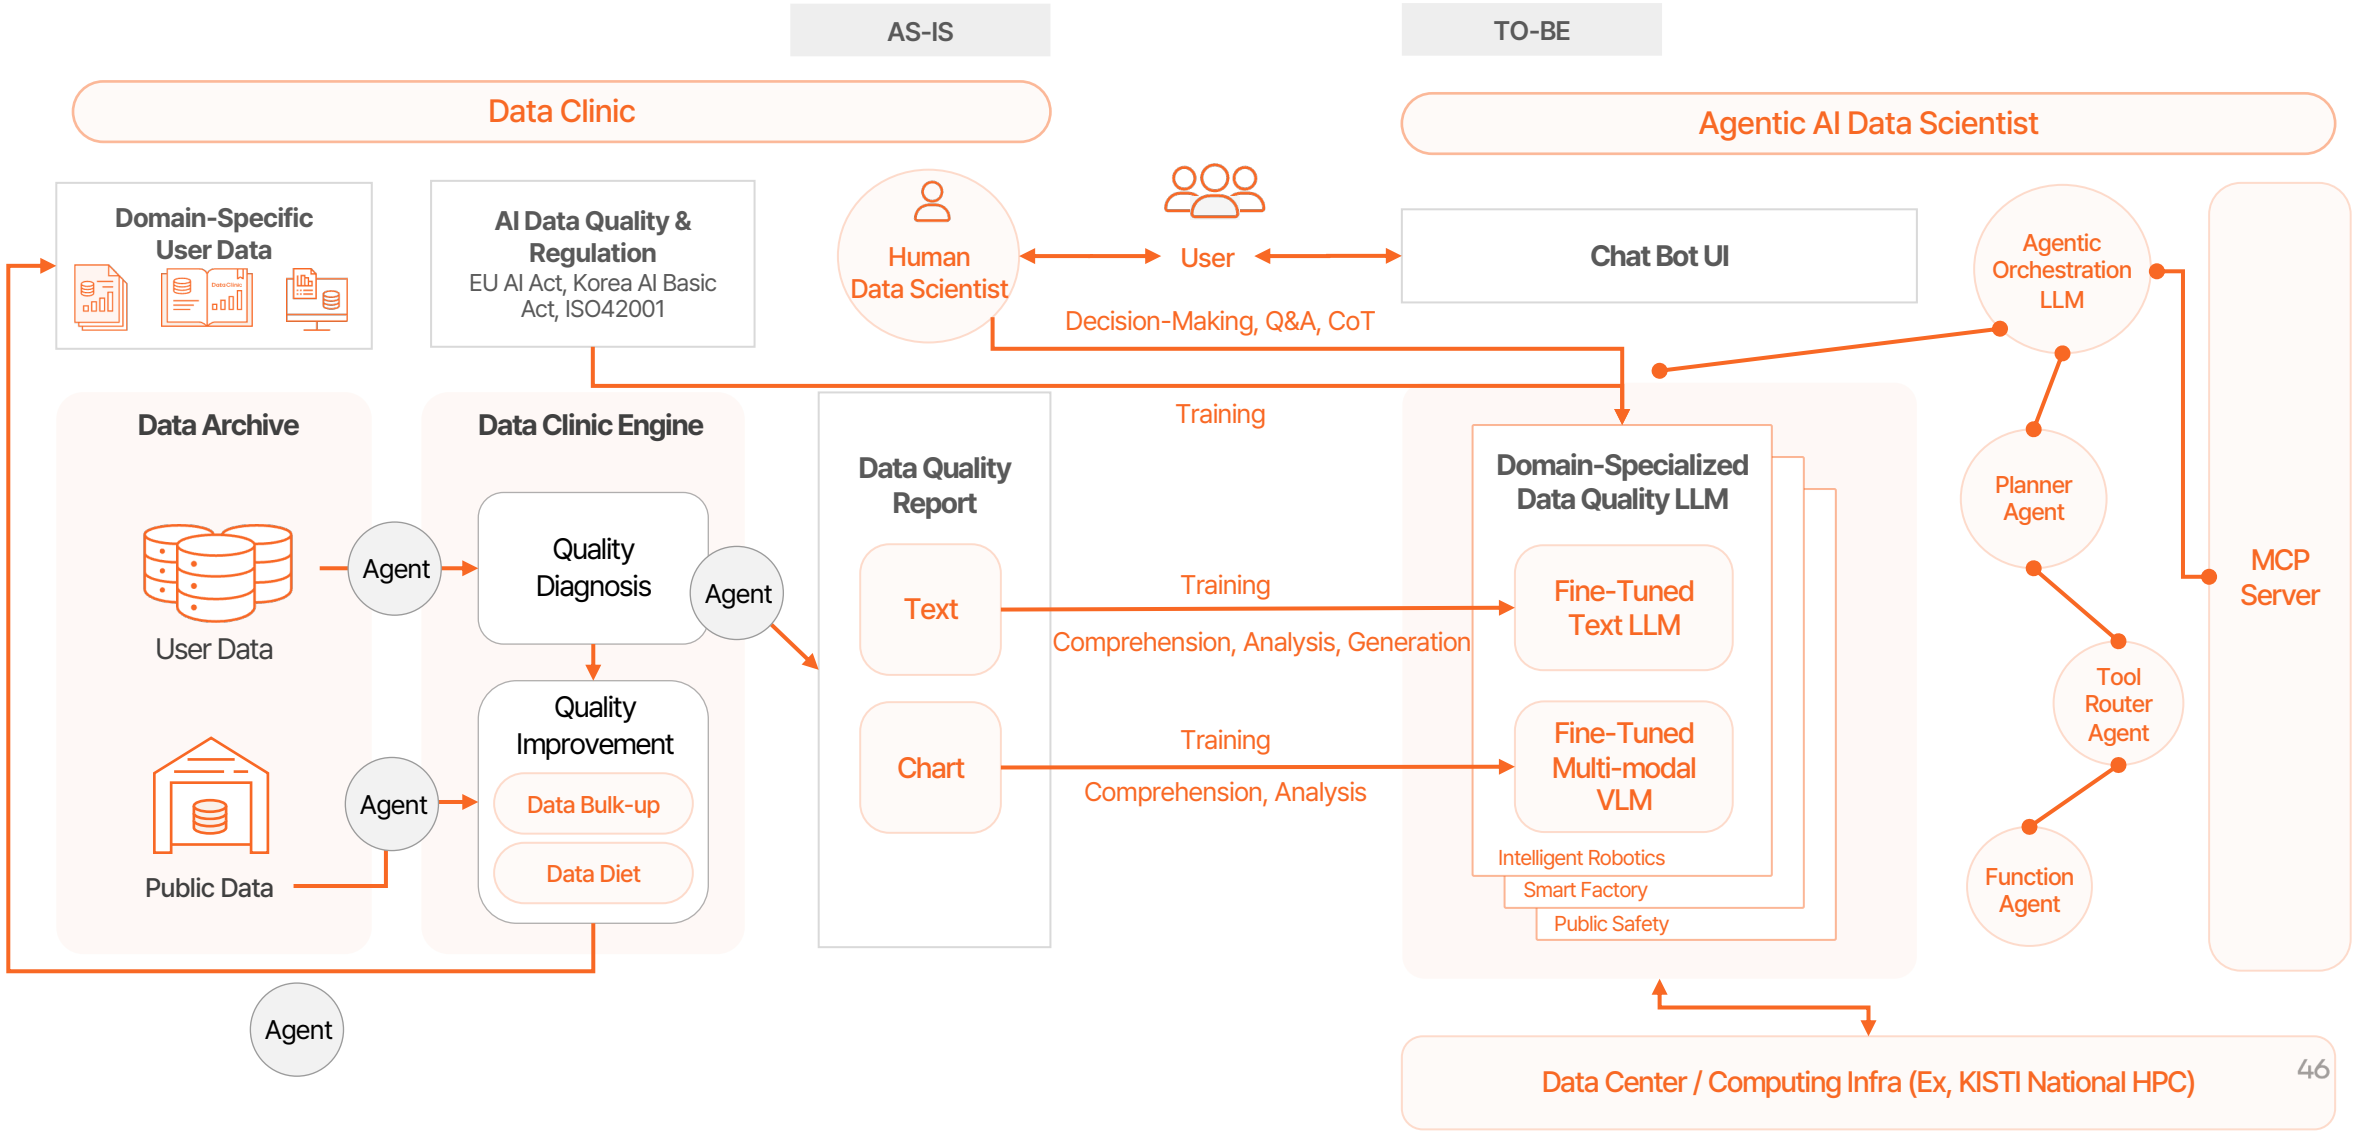
Solution Expansion: Agentic Data Clinic



Pebblous

Solution Expansion: **Ultra-High-Quality Synthetic Data** for Physical AI

Gartner

Emerging Tech: Tech Innovators in Hyper-Synthetic Data for High-Fidelity Imaging

23 June 2025 - ID G00825904 - 26 min read

By: Nick Ingelbrecht, Vibha Chitkara, Tuong Nguyen, Kiumarse Zamanian, Ben Lee

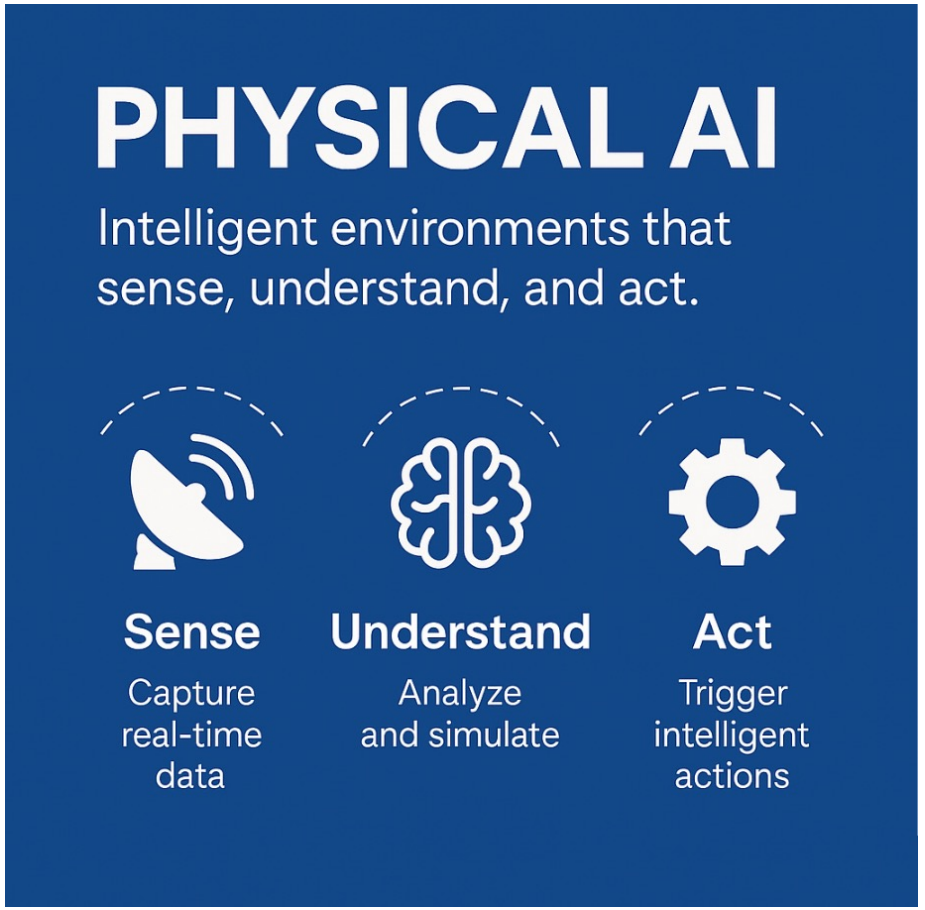
Initiatives:Emerging Technologies and Trends Impact on Products and Services; Increase Product Traction

> The surge in demand for computer vision training data is driving the adoption of hyper-synthetic data (HSD) solutions. Product leaders should capitalize on this emerging AI race opportunity by identifying and integrating high-fidelity spectral imaging innovations into their product roadmaps.

More on This Topic

This is part of an in-depth collection of research. See the collection:

- Emerging Tech Roundup: Navigating Emerging Disruptions and Challenges Ahead



Pebblous

The Fundamental Data Bottleneck in Physical AI

01 Data Famine

Critical Shortage of Edge-Case Data

Real-world "danger scenario" data — accidents, disasters, and other safety-critical events — is either impossible or prohibitively expensive to collect. This is Data Famine.

02 Physical Hallucination

Physical Hallucination in Generative AI

Current GenAI outputs may look plausible, but violate fundamental physics — gravity, friction, and collision — making them unreliable for training precision control models.

03 Data Complexity

Multi-Modal Data Complexity

Synchronizing heterogeneous data — images, sensors, logs — across space and time, and identifying causal relationships, remains an unsolved challenge.

Pebblous

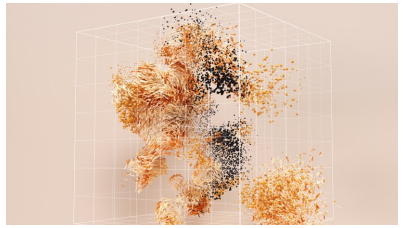
The Definitive Solution to Data Bottleneck: Data Greenhouse + PebbloSim

We don't collect data —
we 'Farm' it.

① Through **PebbloSim**,
which replicates the laws of physics, and

② The autonomous data ops framework
Data Greenhouse,

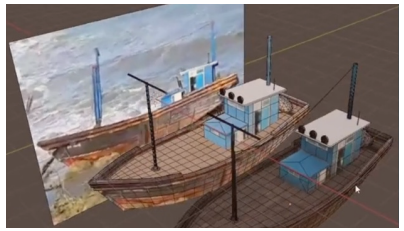
we continuously produce and certify AI-Ready data for Physical AI.



01 Agentic Data Synthesis

'Autonomous Data Bulk-Up' to Solve Data Famine

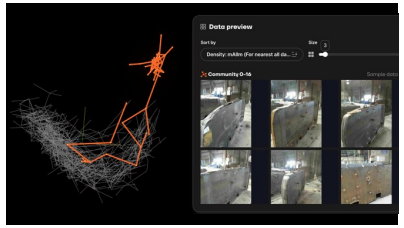
AADS agents autonomously diagnose data gaps and **precision-target** required **edge cases** for synthetic data generation: On-Premise/Sovereign supported



02 Physically-Grounded

'Neuro-Symbolic' Synthetic Data Free of Physical Hallucination

Layering generative AI's **visual realism** on top of simulation's **physical fidelity**, structurally eliminating physical hallucination at its source



03 Explainable Verification

'Explainable Verification' that Identifies Causal Relationships

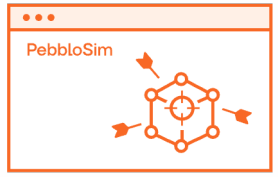
Cross-linking data **distribution (Vector)** and business **semantics (Ontology)** in real time, transparently visualizing and explaining the **rationale behind data generation**

Pebblous

Data Greenhouse OS: An Intelligent Operating System Where Data Grows Itself

Zero Physical Hallucination

ISO Certification Ready



PebbloSim

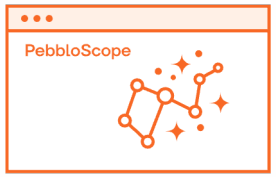
Self-Generate

- Core engine: Digital Twin-based
- Physics-grounded synthetic data
- Precision-target missing Edge Cases

Data Clinic

Diagnose Data

- Precision diagnosis of data gaps & oversaturation
- Auto-prescribe 'what to fix'
- Issue diagnostic reports



PebbloScope

Govern Transparently

- Human-in-the-Loop gateway
- Neuro-Symbolic bi-directional visualization
- Real-time simulation monitoring
